

MOIN UD DIN

+92-305-3284679 | moinuddinrao.dev@gmail.com | linkedin/moinuddinrao | github/moinuddinrao

With over two years of experience, I specialize in developing scalable web applications using JavaScript technologies like React and Node.js, with expertise in both front-end and back-end development, for small to large-scale projects. I also bring hands-on experience from a service-based firm and product development roles in FinTech and Greentech domains, delivering efficient, robust, data-intensive, user-focused applications while meeting tight deadlines.

Education

Bachelor of Science in Computer Sciences	2019 – 2023
Air University, Islamabad, Pakistan	CGPA: 3.17/4.0

Certifications

- The Complete Web Development Bootcamp, Udemy (2021)
- Meta Front-End Developer Professional Certification, Coursera (2022)
- IBM Full Stack Software Developer Professional Certification, Coursera (2023)

Awards & Honors

- 1st Place in Speed Programming Competition, CodeAir 1.0 (2022)
- 3rd Place in Speed Programming Competition, Game of Codes (2022)
- Campus Ambassador of renowned IT firm, Devsinc (2023)
- Certificate of Appreciation for “Craft Your Career” workshop, IEEE CUI (2023)
- Award of Excellence as President of AU Blood Donor Society (2023)
- Award of Excellence as President of AU Computing & Innovation Society (2023)

Tech Stack/ Skills

Languages	JavaScript, TypeScript
Technologies	React.js, Next.js, Node.js, Express.js, Nest.js, Redux, Redux Toolkit, Context API, Zustand, Axios, Fetch API, TanStack React Query, RTK Query, RESTful API, Ant Design, Bootstrap, Chakra UI, Shadcn UI, Material UI, TailwindCSS, Recharts, Ant Design Charts, Jest, React Router, Postman, Zod, Prisma, Prettier, Google Maps, Clerk, Cloudinary, Stripe
Databases	MongoDB, PostgreSQL
Version Control	Git, GitHub, BitBucket
Miscellaneous	Jira, Slack, ClickUp

Work Experience

Aawaz AI	Software Engineer, Pakistan, 05/2024 – Present
1011 Technologies	Jr. Software Engineer, Pakistan, 06/2023 – 05/2024

Volunteer Startup Experience

LEXAM AI	Software Engineer, Pakistan (Remote), 10/2024 – Present
kolum.earth	Software Engineer, Germany (Remote), 11/2023 – 02/2024

Work Summary

Credit Scoring System – Web Application, Admin Dashboard, and Backend Processes

Environment: Vite, TypeScript, React.js, Ant Design, TailwindCSS, Recharts, Axios, TanStack Query, Context API, Node.js, Express.js, MongoDB, Git, GitHub, react-idle-timer, react-to-pdf

Outline: A data-driven credit scoring platform for SMEs. The platform enables efficient management of borrowers, banking analytics, and financial reports, providing deep insights into better decision-making. It features powerful data visualizations, nested financial reports, and ML integration for automated analytics data generation.

Responsibilities:

- Worked as a front-end engineer and led the front-end architecture.
- Designed interactive Pie, Bar, Line, and Tree Map charts using Recharts.
- Implemented 4-level nested tables with advance filtering for financial reports.
- Customized PDF export functionality for reports using react-to-pdf.
- Integrated react-idle-timer for automatic logout after 30 minutes of inactivity.
- Simplified caching for data-heavy modules to improve performance and reliability.
- Introduced best practices for data fetching with parameterized endpoints.
- Collaborated with machine learning engineers to streamline data with ML pipelines.

Merchant Analytics – Web Application and Backend Processes

Environment: Vite, TypeScript, React.js, Ant Design, TailwindCSS, Ant Design Charts, Axios, TanStack Query, Node.js, Express.js, PostgreSQL, Sequelize ORM, Git, GitHub, googlemaps/react-wrapper

Outline: A web application that helps merchants analyze their top delivery zones, track menu performance across mealtimes, and receive data-driven menu addition suggestions. It compares pricing trends, cuisines, and sales with similar merchants, featuring interactive maps, charts, and insights to optimize menu offerings and boost sales.

Responsibilities:

- Led the entire product development as full-stack engineer.
- Visualized top-performing delivery zones polygons and heatmaps using Google Maps.
- Designed Pie Chart to analyze menu performance for different mealtimes.
- Created table with sortable columns for comparative analysis of different periods.
- Developed a menu addition suggestion engine using Bar Charts.
- Optimized API calls and caching, improving performance and load times.
- Conducted daily standups, iterating features based on feedback.

EU CBAM Compliance Portal – Web Application and Backend Processes

Environment: TypeScript, React.js, Ant Design, TailwindCSS, TanStack Query, Nest.js, MongoDB, Prisma, GitHub

Outline: A web application for Germany based startup for Carbon Border Adjustment Mechanism (CBAM) reporting for EU companies. Where companies can manage and add non-EU operators, installations, goods, and imports. Automatically calculate your emissions and conveniently generate and download your CBAM reports.

Responsibilities:

- Collaborated closely with the client to understand the business requirements.
- Led front-end development and delivered the complete front-end within tight deadline.
- Conducted demo to client on daily basis and incorporated client feedback in feature development.
- Ensured complete type safety using advanced concepts of TypeScript to enhance code quality.
- Implemented server-side pagination and error handling, improving application reliability.
- Reviewed PR of the peer engineers and guided on the best practices for code versioning.

AI Business Mentor – Web Application Chatbot

Environment: TypeScript, React.js, Ant Design, TailwindCSS, Axios, TanStack Query, Django, react-markdown

Outline: An AI-powered business mentor that guides entrepreneurs in starting and scaling a business. It provides strategic insights, actionable steps, personalized guidance on business planning, market research, etc.

Responsibilities:

- Collaborated with ML engineers to optimize LLM integration.
- Developed an Ant Design-powered tour guide for onboarding new users.
- Built a real-time Mentor chat window for AI-driven business guidance.
- Integrated Copilots to generate business plans, sales pitches, etc.
- Enabled document downloads for previously generated content.

Adverse Media Screening – Compliance & Risk Monitoring System

Environment: TypeScript, React.js, Ant Design, TailwindCSS, Ant Design Charts, Axios, TanStack Query, Django

Outline: A compliance platform for automating adverse media screening, helping financial institutions detect risks through multilingual news analysis, event categorization, AML topology insights, and report generation.

Responsibilities:

- Scanned customer lists to extract events, keywords, and risk levels.
- Implemented multilingual support to view all news in both English and Urdu.
- Built analytics dashboards for critical and non-critical events in both languages.
- Designed AML topology visualization for identifying risk patterns in adverse media.
- Enabled pdf-report generation for individuals or entire customer lists.

Psychometric Assessment – Web Application and Backend Processes

Environment: TypeScript, React.js, Ant Design, TailwindCSS, TanStack Query, Node.js, Express.js, MongoDB

Outline: A psychometric assessment platform using MBTI-based questions to evaluate personality traits and determine the MBTI type (e.g., ENTJ). It also highlights Strengths, Weaknesses, and suggests Potential Careers.

Responsibilities:

- Worked as a full-stack developer and led the entire product development.
- Understood MBTI personality types to determine the user's personality type.
- Developed an interactive interface to dynamically switch questions upon answering.
- Visualized personality trait metrics on a scale for MBTI dichotomies.
- Implemented sections to display Strengths, Weaknesses, and suggest potential Careers.

Talent Platform – Web Application and Backend Processes

Environment: React.js, TailwindCSS, Redux Toolkit, Node.js, Express.js, PostgreSQL, Google Maps, GitHub

Outline: A location-based freelancing platform that connects clients with local talent. It facilitates job postings, talent discovery, project creation, and real-time communication between clients and freelancers.

Responsibilities:

- Collaborated with client to elicit requirements and understand the freelancing conventions.
- Introduced best practices for project structuring and state management.
- Led the frontend with React.js, incorporating Tailwind CSS for responsive design.
- Integrated Google Maps API for location-based talent search and discovery.
- Set up RTK Query mutations for easy data interaction, ensuring seamless CRUD operations.

AI Image SaaS Platform – Web Application

Environment: Next.js, TypeScript, MongoDB, Clerk, Cloudinary, Stripe, Shadcn UI, TailwindCSS, GitHub

Outline: An AI image SaaS platform that excels in image processing capabilities, offers a user-friendly experience with a responsive design, advanced image search functionalities, and supports multiple AI features, including image restoration, recoloring, object removal, generative filling, and background removal.

Responsibilities:

- Developed the front-end with Next.js, styled using TailwindCSS and Shadcn UI for a modern look.
- Implemented Clerk for secure and fast authentication and route protection.
- Integrated Cloudinary for comprehensive image storage and manipulation capabilities.
- Enabled secure transactions with Stripe, allowing users to buy credits for services.

Social Media Platform and Marketplace – Web Application and Admin Dashboard

Environment: React.js, ChakraUI, Redux, Node.js, Express.js, MongoDB, GitHub

Outline: A novel social media web application and an admin dashboard for comprehensive management. Users can create discussion groups, share posts, engage in chatrooms, and take part in buying and selling. Additionally, the admin dashboard facilitates efficient oversight of groups, members, posts, and critical platform data.

Responsibilities:

- Gathered client requirements for developing an insightful admin dashboard development.
- Aided peer engineer with best practices for the development of admin dashboard.
- Revamped the web app front-end using best React.js and ensured responsive design.
- Collaborated with back-end engineers to make the web app functional.

Housekeeping Booking Platform – Web Application and Backend Processes

Environment TypeScript, React.js, Tailwind CSS, React Query, Node.js, Nest.js, MongoDB, Prisma

Outline: Maidzly is a USA based startup designed to bridge cleaners with potential buyers for various cleaning services. It promotes a user-friendly experience, enabling seamless hiring for housekeeping, office cleaning, and more. Its robust backend ensures efficient data handling and user management, fostering trust and convenience.

Responsibilities:

- Developed new functionalities, extended existing functionalities with client feedback.
- Developed user-friendly web interfaces for both buyers and cleaners.
- Implemented endpoints for user authentication, data retrieval, and manipulation.
- Reviewed and kept track of the work produced by peer engineers.
